# Pemilihan Pencarian

## 1. Advanced Search

The screenshot shows the ProQuest Advanced Search page. A red box highlights a dropdown menu with options: AND, AND, OR, NOT. A red arrow points from this box to a central text box. Another red box highlights a dropdown menu with various search field codes, with 'Subject heading - MAINSUBJECT' selected. A red arrow points from this box to the same central text box. The central text box contains the following text:

**Advanced Search : Untuk melakukan pencarian dengan lebih detail dengan fasilitas AND, OR, NOT, publication date, dll**

The interface includes the ProQuest logo, navigation tabs (Basic Search, Advanced Search, Publications, Databases (3)), and a search bar. Below the search bar are various filters and search options, including 'Publication date', 'Company/organization', 'MeSH subject', 'Subject heading (all)', 'Location', 'NAICS code', 'Source type', 'Document type', and 'Language'. A 'Search' button and a 'Clear form' button are also visible.

## Abstract

Translate

**Objective.** The purpose of the study was to investigate the therapeutic effect and nursing satisfaction of bedside nursing combined with detail nursing in the gastroenterology department. **Methods.** 112 patients with gastrointestinal diseases admitted to our hospital from November 2018 to November 2019 were selected as the study subjects and randomly divided into a research group ( $n = 56$ ) and reference group ( $n = 56$ ). The reference group received routine clinical nursing, while on this basis, the research group received bedside nursing combined with detail nursing. After that, the clinical nursing effect of the two groups were compared. **Results.** There were no significant differences in sex ratio, age, BMI, smoking history, drinking history, marital status, and disease types between the two groups ( $P > 0.05$ ). The VAS scores in the two groups after intervention were significantly lower than those before intervention ( $P < 0.01$ ), and the VAS scores in the research group after intervention were significantly lower than those in the reference group ( $P < 0.05$ ). The nursing ability, nursing skills, and nursing responsibility in the research group were significantly higher than those in the reference group ( $P < 0.05$ ). There were no significant differences between the two groups in the number of patients who were satisfied and needed improvement ( $P > 0.05$ ). The number of very satisfied cases in the research group was significantly higher than that in the reference group ( $P < 0.05$ ), and the number of u
